## **IT Experts Industry Needs Workshop at MASIT, Skopje, MK**

IT experts group is a national wide body of IT experts and acts as counselling body to MASIT (Macedonian Association of IT Companies). Members of beneficiary universities are members of IT experts group and they initiated a meeting with MASIT representatives for definition of requirements and profiles of IT specialist in IT industry and Macedonia at all.

All conclusions from this meeting meet the objectives of this project. Usually IT specialist that are educated at the Universities are very narrow in technology and are educated with technology driven aspects. There is an extensive need for management skills in Computer Science Studies which will cover organizational aspects and project management.

There were some results concerning SME (Small and Medium Enterprises). Another issue is the education of business aspects as complementary to the technology driven education. It was concluded that the education should fill the gaps with courses that have business nature in order to make the students think about business needs and making applications that will help realization of other processes.
