Management and (e)Business Education in
Computer Studies

Workshop:

Workshop – Software Project Management
presentations (part 3)

Bitola, December 2006

Workshop – Software Project Management presentations (part 3)

The organized presentations covered two project outcomes for developing New teaching materials and New teaching training. Prof. Marjan Gusev has given presentation about Project Management Tools, and M. Sc. Goce Armenski has demonstrated computer based tools for Project Management. The students had chance to try different ICT tools and practice on successful usage in the process of project management. Several best practices were shown to students. There was a fruitful discussion about a given list of projects that students will have to realize in order to demonstrate their knowledge and skills in Software Project Management.

Workshop – Software Project Management presentations (part 2)

Prof. Dr Marjan Gusev gave presentations in relevance to dissemination activities for the project. The presentations were used as lectures to the final year students for Software Project Management. These lectures are part of the developed course for undergraduate studies of Information Technologies in accordance of the MABECS project for Management and Business Education for Computer Sciences. This presentation consisted of topics about software processes with special accent to software specification and requirements analysis; software design, including architecture design, component design and interface design; risk engineering, including analysis and decisions to use and actions to be taken in solving crisis; project management, including scheduling, planning dependence analysis, concurrency etc. According to the student response this presentation was very useful for the students.

Workshop – Software Project Management presentations (part 1)

Prof. Dr Marjan Gusev and M. Sc. Goce Armenski gave presentations about Software Project Management at Faculty of Technical Sciences of St. Clement Ohridski University of Bitola. It was realized in relevance to dissemination activities for the project. The presentation was given to the final year students for Software Project Management. The presentation consisted of topics concerning the relevance of project management, importance of software project management, socio-technical systems and best practices in developing software

projects with issues in team management and how to solve problems associated with them. These lectures are part of the developed course for undergraduate studies of Information Technologies in accordance of the MABECS project for Management and Business Education for Computer Sciences. This presentation was very useful for the students.
